

RESILIENT FLOOR FINISH FOR CAR PARKS

# System CPD

Tested to BS6319 Certified to BS5750

## Meeting today's demands

The opinion a customer forms about any facility begins long before they step through the doors. Users of the modern car park have high expectations and to make a professional impression right from the start it is essential that your car park is safe, clean and user-friendly.

## The professional flooring solution

Developed specifically to meet the requirements of today's car parks, System CPD is a seamless coating produced in specialised grades for use on walls, floors and ceilings.

Providing a hardwearing, watertight finish, System CPD is 100% resilient to petro-chemical spillages making it easy to clean and maintain in excellent aesthetic order.

## Safety first

Manufactured from tough polyurethane resin, System CPD offers a slip resistant finish making it safer for people both walking and driving, even in wet weather. Ensuring the highest standards, this floor finish is tested to BS6319.

## Maintenance made easy

Being totally resistant to oil, petrol, antifreeze, acid and road salts, System CPD has a long life expectancy and requires minimal maintenance. By providing a completely seamless, sealed finish, alkaline salts are prevented from leaching from the concrete base, eliminating a common problem of staining. Using conventional detergents, cleaning is both rapid and straightforward.

## Protecting the structure

It is often the case that a car park acts as the roof for shops and other facilities situated below. It is essential therefore that a waterproof seal is created on the decking of the car park in order to stop rain penetration causing damage to goods and interiors below. System CPD delivers a waterproof seal that removes the risk of rainwater seeping through to the structure of the building and attacking reinforcements.

### **A contemporary finish**

The product is available in a number of grades to suit different applications and may be colour-matched to existing décor schemes. Colour-coded parking bays and pedestrian walkways can be incorporated into the design and Ryebrook is also capable of installing disabled logos, cross hatching and other relevant markings.

### **Inherently flexible**

Any car park floor has to withstand considerable changes in weight distribution. The weather can also cause substantial movement in the floor as the temperature changes. Designed to maintain its integrity even under such extreme conditions, System CPD removes the risk of cracks occurring, effectively extending the lifespan of the structure.

### **Installation guidelines**

System CPD can be laid on any type of substrate. Our expert team of installers are experienced in carrying out professional preparation work, even with uneven pre-cast concrete, ensuring a sound base is created onto which the final floor coating can be laid. Installation time will vary for each project, but this system can be laid all year round.

#### System CPD

- hardwearing
- chemical resistant
- waterproof
- seamless
- slip resistant
- temperature tolerant
- inherently flexible
- graffiti-proof

### A long term solution

System CPD carried a 10 year guarantee for both materials and labour

### Free advice

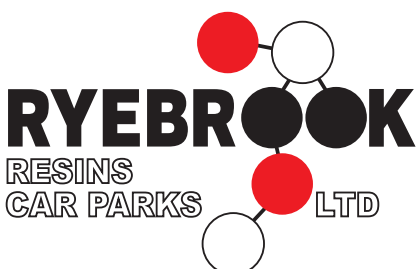

Ryebrook Resins is able to provide full site survey and technical assistance with specification requirements completely free of charge
