

## FOOD SAFE FLOORING FROM RYEBROOK

---

Ryebrook Resins has recently completed the installation of their *FoodSafe* floor system at the new production plant of specialist food preparation and distribution company, Kam Kee Ltd.

Developed specifically to meet strict Health and Safety regulations, the **FoodSafe** system delivers a completely seamless finish, removing the threat of microbes and bacteria being harboured in hard-to-clean joints. Capable of withstanding the heat from steam cleaning, a hygienic environment can easily be maintained whilst also providing protection from the risk of thermal shock from the cooking process. Selected from a range of 12 colourways, the Kam Kee floor is finished in a striking blue.

Suppliers of food to Chinese and Japanese restaurants and takeaways, rapid expansion has meant that Kam Kee Ltd has had to relocate to a larger, 500m<sup>2</sup> production unit in Woolwich. Working with main contractors, Tam & Co., Ryebrook initially laid a bedding screed onto the concrete base effectively creating a fall throughout the kitchen area, allowing waste water to drain down through a channel in the centre of the room.

Ryeflor HF, an impervious polyurethane screed was then laid to a thickness of 6mm, except for in the freezer area where it was laid to 9mm to cope with the extremes of temperature. For ease of cleaning, a 150mm high radius cove skirting was created around the perimeter of the room and at all junctions of the wall and floor.

Non-production areas such as staff rooms and changing facilities were laid with Ryeflow 2000 Plus, a seamless epoxy resin floor with a slightly textured finish to give a safe anti-slip surface.

"We have worked with Ryebrook Resins on two previous occasions when refurbishing Chinese restaurants," explains Michael Tam of Tam & Co. "their **FoodSafe** floor is exceptionally hard-wearing, giving the ideal finish for any area which has to work to stringent health and safety guidelines.
