

HYGIENIC, SAFE FLOORING FOR WASHROOMS

- **D**elivering a finish that is safe, hygienic and easy-to-clean, a resin floor from Ryebrook Resins Ltd is hardwearing and chemical resistant, as well as meeting today's stringent health and safety requirements for washrooms and toilet facilities.

- **C**reating a completely seamless finish, the threat of microbes and bacteria being harboured in hard-to-clean joints is removed, whilst a radius cove skirting makes cleaning the floor area quick and efficient. A traditional mop and bucket can be used, although most professional installers would recommend a scrubbing machine. If higher levels of hygiene are demanded, steam cleaning is an option although this must be highlighted at specification stage.

- **A**voiding unnecessary trips and falls in the washroom areas, a slightly textured, slip-resistant finish can be added during installation, making the floor safer for staff.
- **A**esthetics need not be compromised for functionality, with Ryebrook offering a range of twelve colourways. This allows for demarcation of specific areas and walkways, as well as producing an attractive finish.
