

Offering a hi-spec facility, this newly refurbished warehouse in Milton Keynes features a Ryetech solvent-free resin floor system, supplied and installed by Ryebrook Resins of Crawley. Working to an extremely tight deadline, the Ryebrook team prepared and laid the entire 9,600m² warehouse in just six days. The resulting floor is ideal for this high traffic warehouse application, delivering exceptional load and impact resistance, whilst also being seamless and therefore easy to maintain. Managing agents for the property, LaSalle Investment Management, are delighted with the smooth, professional finish, making the property easier to let to a wide range of industries.

With over 21 years of specialist experience in the formulation and application of seamless floor and wall coatings, Ryebrook Resins offer solutions to suit almost any industrial or commercial situation including plant rooms, pharmaceutical production and food preparation facilities, engineering, offices and retail outlets. With many resin systems being available in up to twenty different colour-ways, designated areas can be effectively marked out to improve functionality as well as aesthetics.

At the Milton Keynes warehouse, Ryebrook first prepared the existing concrete slab with a combination of shotblasting and diamond grinding. Two coats of the high-build Ryetech floor coating were then laid, to an overall thickness of 0.5mm, in high-gloss light grey. The installation was successfully completed within specified deadlines.
